

# Installation on Mac

If you are a Mac user you won't be able to use JSGME.exe to change the scenery into Winter Version but have to copy the relevant files manually.

1. Backup all Svalbard Airports and the Mesh as summer version.
2. Navigate to the MODS folder in your downloaded zip file. Open each Airport/Mesh and copy the new Airport in the custom scenery folder to your actual custom scenery folder in X-Plane 11 and overwrite all files.
